### ALIGNMENTS

New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury cdn-3; apoptosis modulator; adoptive immunotherapy; therapy; HIV; autoimmune disease; reperfusion injury; hepatitis, osteoporosis; shock; lymphoma; eczema. Disclosure; Fig.7B-C; 66pp; English.
Southern blot analysis of human genomic DNA and a panel of human/rodent somatic cell DNAs revealed at least 3 Cdn-related genes residing on chromosomes 6, 11 and 20. Cdn-3 (R77878) did not contain the structural features of Cdn-1 (R77876), Cdn-2 Sequence 88 AA; Length 88; .r 1 R77878 standard; Protein; 88 AA. 08-JUN-1994; U.13930. 30-NOV-1994; U.13930. 30-NOV-1994; US-160067. 07-OCT-1994; US-320157.                                                                                                                                                                                                                                                                                        This Bak-2 protein sequence represents a bc1-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak-2 and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-PSDB; 095492.
New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury

Cdn-1 cDNA was isolated from a human heart cDNA library using a Cdn-1 cDNA was isolated from a human heart cDNA library using a proviously isolated clone as probe. Recombinant Cdn-1 was produced in Sf9 and human colon adenocarcinoma HT29 calls. Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.

This Bak protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRR1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion or protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRR1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Compounds which

Disclosure; Fig.5D-E; 66pp; English.
Cdn-2 cDNA was isold. from a human placental genomic library
cdn-2 cDNA was isold. from a human placental genomic library
using a 950 bp fragment of Cdn-1 cDNA. Expression of Cdn-2
in mouse progenitor B-cell FL5.12 cells decreased IL-3-induced
appropria: The Cdn-2 protein displayed 97% amino acid identity
with Cdn-1 (R77876).

Human interleukin-I-converting enzyme-like apoptosis protease-3. 
ICE-LAP-3; interleukin-I-converting enzyme-like apoptosis protease; enzyme; Alzheimer's disease; Parkinson's disease; septic shock; head injury; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Numan ICE-LAP-3 and -4 DNA and protein - useful in the diagnosis and treatment of Alzheimer's disease, Parkinson's disease, rheumatoid arthritis, septic shock and head injury (Laim i, Page 91-92; 67pp; English.

This ICE-LAP-3 protein may be used therapeutically, e.g. as an antitumor or antiviral agent and to control embryonic development and tissue homeostasis. The protein can also be used to treat immunosuppression disorders, such as AIDS, by targeting virus infected cells for cell death. The DNA may find use in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 341;

The enzymes (R66729-34), encoded by genes 079907-12, are involved in the synthesis of dihydrodiol and catechol compounds by microbial fermentation in E.coll at normal temps. and pressures from aromatic Phydrocarbons.

The sequence presented here its of an aromatic deoxygenese of 459 amino acids. The aromatic dihydrodiol can be used as a raw material for engineering plastics and the catechol compound is used as a polymerisation inhibitor of synthetic resin and as an intermediate in drug synthesis.
02-001-1995 (first entry)
Aromatic dihydrodiol/catechol deoxygenase #1.
Dihydrodiol; catechol; microbial fermentation; E.coll; aromatic;
deoxygenase; hydrocarbon; engineering plastic; polymerisation inhibitor;
synthetic resin; drug synthesis.
Pseudomonas fluorescens SD805.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŝ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Fig 2; 30pp; English.

Overlapping clones, which make up the CDNA sequence from which this sequence was deduced, were isolated from a murine PBL CDNA library prepared in lambda gt10. The purified protein can mediate the cytolytic activity of mammalian cells. It specifically distinguishes tumour cells making it a candidate for the development of products for the immunodetection and immunotherapy of tumours.
                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
In HSV-1, 4 intron-less open reading frames (ORFS) are present within the sequence specifying the L/ST junction-spanning transcript. ORF1-4 are given in Q76209-12, and encoded proteins in R64327-30. Antibodies raised against such proteins may be used to identify therapeutic agents.
                                                                                                                                                                                                                            Ĥ

```
prods. for the immuno-detection and immuno-therapy of tumours Disclosure; Fig 1; 30pp; English.
Overlapping clones, which make up the cDNA sequence from which this sequence was deduced, were isolated from a cDNA library prepared from human NK cells purified from human peripheral blood. The purified protein can mediate the cytolytic activity of mammalian cells. It specifically distinguishes tumour cells making it a candidate for the development of products for the immunodetection and immunotherapy of tumours. See also Qi3115.

EMBO J. (1993) 12:3763-3771
The heat shock cognate protein from Dictyostellum affects
actin polymerization through interaction with the
actin-binding protein cap32/34.
                                                                                                                                                                                                                                  S37394 *type complete

-!- FUNCTION: SSA2 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES BOTH ACROSS THE MITOCHONDRIAL MEDRANES AND INTO THE ENDOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST SSA1 AND SSA2 PROFEINS IS EXECTED. SSA2 CAN PARTICIPATE IN THE ATP-DEPENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.

RE SUBMITTED (XXX-1992) TO EMBL/GENBANK/DDBJ DATA BANKS.

CC -I- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PRESESTSTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN CC OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN CC OF NEWLY TRANSLATED POLYPEPTIDES IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THESE EXPOSED BY POLYPEPTIDES DURING TRANSLATION OF FOLLOWING STRESS-INDUCED DAMAGE.

CC HYDROPHORIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION OR FOLLOWING STRESS-INDUCED DAMAGE.

CC -I- SIMILARITY: BELONGS TO HEAT SHOCK PROTEIN 70 FAMILY.

protein

Disclosure; Fig 1: 24pp; English.

This Bak protein sequence represents a bcl-1 homologue which riteracts with Epstein-Bar virus (EBV) early lytic cycle BHRF1 interacts with Epstein-Bar virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may brotein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral ceplication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or Compounds which an antibody; Human; Bak; apoptosis; latency; virus replication; Epstein: Barr virus; BHRF1; fusion protein; epitope tag; drug screening; co-precipitation; ELISA; immunoassay; antibody; protein interactive trapping; virucide; antitumour; diagnostic. Screening for anti-viral agents - by detecting the ability of agent to disrupt the interaction of a Bak protein and a viral T 1 W03668 standard; Protein; 211 AA. 19-APR-1996; U05639. 20-APR-1995; US-426529. New isolated human Bcl-Y protein - used to develop prods. for
troating disorders characterised by inappropriate cell proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 masgagpppraecgepalpsaseegvaddteevfrsyvfyrhqqeqeaegvaapadpem 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 3; Fig 4: 100pp; English.

Bcl-Y protein (R81451) is a member of the Bcl-2 family and can induce apoptosis in cells and function as a negative regulator of Bcl-2 function. Bcl-Y mRNA was detected in all human tumour cell lines examined and is also widely expressed in primary human tissues. It can be obtd. by expression of a full-length cDNA clone (T1735) in pref. mammalian host cells. Bcl-Y can be used to develop prods. for treating disorders associated with inappropriate cell proliferation or cell death, and to raise antibodies used for the diagnosis or monitoring of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid sequences encoding cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Fig. 3A-B; 66pp; English.

Cdn-1 cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Cdn-1 was produced in Sf9 and human colon adenocarcinoma HT29 cells. Expression of cdn-1 in WT-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels 1; Gaps

This Bak-2 protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may
Cdn-1; apoptosis modulator; adoptive immunotherapy; therapy; HIV autoimmune disease; reperfusion injury; hepatitis, osteoporosis; shock; lymphoma; eczema.

Interaction of Bak-2 and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vtlplqpsstmgqvgrqlaiigddinrrydsefqtmlqhlqptaenayeyftkiasslfe 120

shock; lymphoma; eczema.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      etc.
Disclosure: Fig.5D-E; 66pp; English.
Cdn-2 cDNA was isold. from a human placental genomic library
using a 950 bp fragment of Cdn-1 cDNA. Expression of Cdn-2
in mouse progenitor B-cell Fi5.12 cells decreased IL-3-induced
apptosis. The Cdn-2 protein displayed 97% amino acid identity
with Cdn-1 (R77876).

Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 Sequence 152 AA;

N-PSDB; 081696.
New POLY-nucleotide encoding new Poly-peptide(s) that modify
N-PSDB; 081696.
New Poly-nucleotide encoding new Poly-peptide(s) that modify
apoptosis - and related vectors, recombinant cells and
antibodies, useful in assay and for control of cell death in e.g.
neuronal cells, lymphocytes and cancers
claim 4; page 87: 127pp; English.
This protein may be expressed recombinantly, particularly with pcmV
plasmids as vectors for expression in mammalian cell cultures.
The protein has particular application in cancer cells (failure of
programmed cell death (PCD) or neurodegenerative and autoimmune diseases
(premature PCD), e.g. Parkinson's disease, amylotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              60 vvngatvhrsslevheivrasdvrgalrdagdefelryrrafsdltsglhitpgtaygsf 119

Nucleic acids encoding apoptosis regulating proteins - useful for diagnosing and treating immune disorders, malignancies, etc.
diagnosing and treating immune disorders, malignancies, etc.
Example 8; Page 34-35; 60pp; English.

Example 8; Page 34-35; 60pp; English.

The 80-6 mutant (W01020) of the bcl-2 oncogene product (W01018) lacks amino acids 80-86 of the native protein. This and other Bcl-2 mutants (see also W01019-21) were used in a two hybrid assay to examine the interactions between Bcl-2 and novel apoptosis-regulating proteins N1p1, N1p2 and N1p3 (W00997-99). 2 Motifs (W01003-04) on Bcl-2 were identified that are essential for interaction with the N1p proteins. These motifs show homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Apoptosis blocking protein Bcl-2 mutant 80-6 (del80-86).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 mlqhlqptaenayeyftkiatslfesginwgrvvallgfgyrlalhvyqhgltgflgqvt 60
New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid sequences encoding cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                          Indels 1; Gaps
                                                                                     Disclosure; Fig.11; 66pp; English.

Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 70 amino acids of Cdn-1 improved this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Fig.11; 66pp; English.

Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in Tesponse to anti-Fas-mediated apoptosis. Truncated Cdn-1 derivatives given in R77879-81 were used to test the effects of deleting the N-terminal sequences of Cdn-1 on this activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 rfvvdfmlhhctarwiaqrggwvaalnlgngpilnvlvvlgvvllgqfvvrrffks 116

Inducing or preventing death of T cells by bcl-XL protein regulation used to increase survival of HIV infected cells or to dwn:regulate immune responses in immune diseases

Disclosure; Page 52-53; 76pp; English.

This is the sequence of a human bcl-XL protein, which protects
This is the sequence of a human bcl-XL protein, which protects
acks a stretch of 63 amino acids, and is a dominant negative
lacks a stretch of 63 amino acids, and is a dominant negative
regulator of bcl-XL function. The gene may be modified to
facilitate interaction with costimulatory Bax protein and inhibit
interaction with antagonistic Bad protein, by modification of the
Bcl-2 homology domains BHI and/or BHZ. The bcl-XL gene may be
introduced into T-cells in vivo or ex vivo via gene transfer using
a vector for HIV infection gene therapy, to augment intracellular
continuous protein levels and protect from cell death. A corresponding
antisense oligonuclectide or expression vector may be used in gene
therapy of e.g. autoimmune disease, graft rejection or graft.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 dspavngatghs-ssldarevipmaavkqalreagdefelryrrafsdltsqlhitpgta 119

Claim 3; Page 94; 127pp; English.
This protein may be expressed recombinantly, particularly with pcmV plasmids as vectors for expression in mammalian cell cultures, protein has particular application in cancer cells (failure of programmed cell death (PCD) or neurodegenerative and autoimmune diseases (premature PCD), e.g. Parkinson's disease, amylotrophic lateral sclerosis and multiple sclerosis.

                              Nucleic acids encoding apoptosis regulating proteins - useful for diagnosing and treating immune disorders, malignancies, etc.

diagnosing and treating immune disorders, malignancies, etc.

Example 8; page 33-34; 60pp; English.

The 42-8 mutant (W01019) of the bcl-2 oncogene product (W01018)

Lacks amino acids 42-48 of the native protein. This and other

E Bcl-2 mutants (see also W01020-21) were used in a two hybrid assay

to examine the interactions between Bcl-2 and novel apoptosis-

regulating proteins Nipl, Nip2 and Nip3 (W00997-99). The Nip

C proteins were unable to interact with mutant 42-8. The site of

deletion in this mutant corresponds to a motif (see also W01003)

C binding motif (W01004) of Bcl-2 was also identified, and both

show homology to motifs (W01005-06) found on the 19K protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                    125 tvvoelfrdgvnwgrivaffefggvmcvosvnremsplvdnialwmteylnrh-lhtwig 183

Wethods for producing and identifying mutant bol-2 proteins -
that lack death repressor activity and/or lacks binding to Bax.

By Disclosure; Bage 40; 1379p; Banglish.

The sequences given in R71404-05 represent the human bol-2 alpha and
beta proteins respectively. bol-2 is encoded by a proto-oncogene and
construction by enhancing apoptosis in many hematopoietic cells systems.
bol-2 is a 26 kD membrane-associated cytoplasmic protein and is thought
co function by enhancing the survival of hematopoietic cells of B and T

concentrations of IL-3. bol-2 has been shown to form hererodiners with
concentrations of IL-3. bol-2 has been shown to form hererodiners with
concentrations of IL-3. bol-2 has been shown to form hererodiners with
concentrations of IL-3. bol-2 has been shown to form hererodiners with
concentrations of IL-3. bol-2 has been shown to form hererodiners with
concentrations of IL-3. bol-2 has been shown to form here connect the death repressor activity of bol-2 in which there is at least one amino acid substitution or deletion
in the BHI or BH2 domains. This makes the mutant protein substantially
concentring death effector molecules. Up regulating bol-21s beneficial in
treatment and diagnosis of immunodeficiency diseases, including AIDS and
concrament and diagnosis of immunodeficiency diseases, including AIDS and
concrament and allament cell death.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
